

DAILY MARKET REVIEW

ELECTRIC POWER INDUSTRY NEWS

The regulator wants to make leaving for independent generation unprofitable

"Market Council" is looking for a way to stop industrialists from leaving the unified energy system for cheaper sources of supply. Rough enough options are being considered. For example, consumers who left may be obliged to pay for the grid reserve and all non-market markups on an equal basis with participants in the unified system. In addition, the operation of independent thermal power plants can be made less profitable by lowering their selling prices. Without these measures, "Market Council" fears that the business will build 22 GW of new capacities for itself, which is almost 10% of the current capacity of the Russian Federation energy system. But experts believe that tightening the rules will only accelerate the withdrawal of businesses from the energy system.
